

Symbiont Winter – BP

3/25 pollen germination

16/190 sporulation

9/109 organic cation transport

59/485 monoatomic cation transport

3/85 lipid homeostasis

2/17 mitochondrial respiratory chain complex assembly

6/23 amine biosynthetic process

6/11 inflorescence development

74/650 protein phosphorylation

86/275 cytoplasmic translation

19/231 response to cadmium ion

3/29 response to interleukin-4

18/159 protein-containing complex disassembly

13/110 peptidyl-proline modification

42/305 protein folding

2/12 mitochondrial protein catabolic process

8/96 DNA geometric change

11/24 protein trimerization

4/10 photosynthetic electron transport chain

p < 0.001

p < 0.01

p < 0.05
